

ANTI-SKID / HIGH FRICTION SURFACING VEHICLE

TECHNICAL INFORMATION

ANTI-SKID / HIGH FRICTION SURFACING VEHICLE

This Somerford anti-skid / high friction surfacing vehicle is built with a flat-deck body and drop side doors to each side facilitating easy access for pallet loading. The standard specification – which, as with all our vehicles, can be adjusted to suit individual requirements - incorporates a set of heavy duty twin 450 litre vertical anti-skid preheaters which are mounted within a rear drop-well platform to give a safer operator working height and ease of material loading from the vehicle deck.

Boilers can be supplied either gas fired, with fully electronic gas management system; or alternatively, the diesel fired preheater option is supplied with integral fuel management system. Drive is by either a well tried and tested diesel engine mounted below the chassis deck on a sliding frame for easy access, or by power take off (PTO).

FEATURES

- Heavy duty set of twin 450 litre vertical anti-skid preheaters
- Choice of options on boiler systems
- An on-board compressor powers the hot compressed air (HCA) lance equipment, accommodating any material removal and surface drying or preparation needs
- A full range of hand tools is available to suit customer specific requirements, along with a free-standing tool heater
- Storage for gas bottles, tools and small signs is also incorporated into the standard specification build
- Warning lights and rear sign board for traffic control, with an optional fully electronic rear arrow display system available
