

# SCREED VEHICLE

## TECHNICAL INFORMATION

### SCREED VEHICLE

This unit is probably the most used and sought after equipment in the Somerford range. The body incorporates a canopy with both sides facilitating pallet loading so material is kept dry, but leaves enough space for the operator to load the preheaters.

Vehicles are fitted with warning lights and rear sign board for traffic control, with an optional fully electronic rear arrow display system available. The standard specification – which, as with all our vehicles can be adjusted to suit individual requirements

Boilers can be either gas fired, with an option of either fully electronic gas management system or electro mechanical flame fail and thermostat control; or alternatively, the diesel fired preheater option is supplied with integral fuel management system.

### FEATURES

- Set of twin vertical thermoplastic preheaters
- Safety bag loaders fitted to preheaters
- Drive is by either a well tried and tested diesel engine mounted below the chassis deck on a sliding frame for easy access, or by power take off (PTO)
- On-board compressor powers the hot compressed air lance equipment, accommodating line removal and surface preparation needs.
- A full range of hand tools in sizes from 50mm up to 300mm is supplied for the smaller and more intricate marking requirements, along with a handmould heater
- Together with a wide range of ancillary tools and equipment, this vehicle accommodates virtually every requirement for complete lining function
